

We started off with a reflection and gyan session. We reflected, shared some thoughts, ideas and some of the interesting projects that we worked on in the past. The second session was all about learning about 3D printing and laser cutting. Gained a lot of knowledge on 3D printing which was really helpful. Got a lot of insights into how to design and build. The third session was about electronics and again learnt a lot of important things. The fourth session was all about learning about some really fun stuff like power tools in the wood work lab. In this session we completed working on our stamps.
